

Exhibit 1 depicts a business plan for a hypothetical firm, illustrating the role of the capital markets in the financing of the firm's investment opportunities. The firm's investment opportunities are represented by the firm's market value of equity, which is the sum of the firm's market value of debt and the firm's market value of equity.

Hyman's unity rules state that animals are organized in a hierarchical manner. On the other hand, the unity rules state that animals are organized in a hierarchical manner. On the other hand, the unity rules state that animals are organized in a hierarchical manner.

For each of the following, give a brief description of the structure and function of the structure. (10 marks)

1. **Epithelial tissue** - covers the body and organs, acts as a barrier to the environment, and is involved in the exchange of materials between the body and the environment.

2. **Connective tissue** - supports and connects different parts of the body, and is involved in the transport of materials between different parts of the body.

3. **Muscle tissue** - contracts and relaxes, and is involved in the movement of the body.

4. **Nerve tissue** - transmits electrical signals, and is involved in the control of the body.

### 3 - pharyngeal pouches & gills

**The anatomical organization of the sensory system is hierarchical and sequential: input organs (eyes, ears, nose, skin).**

- 1.1. **Key sensitive neurons:**
  - **Receptor cells:**
    - **Photoreceptors:** rods and cones
    - **Chemoreceptors:** taste buds
    - **Mechanoreceptors:** hair cells
    - **Thermoreceptors:** free nerve endings
    - **Pain receptors:** nociceptors
    - **Pressure receptors:** mechanoreceptors
    - **Temperature receptors:** thermoreceptors
    - **Chemical receptors:** chemoreceptors

**Central nervous system: the brain and spinal cord.**

**Brain:** the central organ of the nervous system, responsible for processing sensory information and controlling motor output. It is divided into two main parts: the cerebrum and the cerebellum. The cerebrum is the larger part and is responsible for higher-level functions such as thought, memory, and emotion. The cerebellum is smaller and is responsible for coordinating movement and balance.

**Spinal cord:** a long, thin, flexible structure that runs down the back, protected by the vertebral column. It is responsible for transmitting signals between the brain and the rest of the body. The spinal cord is divided into segments, each of which controls a specific part of the body.

**Sensory system:** the system of organs and structures that receive information from the environment and transmit it to the brain. It includes the eyes, ears, nose, skin, and taste buds.

**Motor system:** the system of organs and structures that control movement. It includes the brain, spinal cord, and muscles.

**Integrative system:** the system of organs and structures that process information from the sensory system and send it to the motor system. It includes the brain and spinal cord.

**Effector system:** the system of organs and structures that carry out the commands from the brain and spinal cord. It includes the muscles and glands.

**Control system:** the system of organs and structures that regulate the activity of the other systems. It includes the brain and spinal cord.

**Feedback system:** a system of control in which the output of a process is fed back into the input, allowing the system to adjust its activity and maintain a stable state. It is a fundamental principle of control systems in biology and engineering.

**Homeostasis:** the process by which the body maintains a stable internal environment despite changes in the external environment. It is a fundamental principle of biology and is essential for the survival of all living organisms.

#### 4. **Physiological organization of the system**

| Physiological organization | Physiological organization         | Physiological organization | Physiological organization |
|----------------------------|------------------------------------|----------------------------|----------------------------|
| Input: Sensory organs      | Processing: Central nervous system | Output: Motor organs       | Feedback: Sensory organs   |

[illegible]

| Explanatory variables | Dependent variable
